0.1 Accessing our course repo

0.1.1 Interactively

- can execute/modify code/markdown cells
- Two ways:
 - binder:
 - * interact with Jupyter Notebooks in a live environment on a server (called Jupyter Hub)
 - * can modify code/markdown cells but the changes will not be saved
 - locally:
 - * download/clone the repo to your local computer and start Jupyter Notebook with the command `jupyter notebook` from a shell
 - * can modify code/markdown cells and the changes will not be saved
 - * we will learn more about this later in the class

0.1.2 Noninteractively

- Cannot execute code/markdown cells
- Jupyter Notebook is displayed as static html.
- Two ways:
 - GitHub viewer: Click on the Jupyter Notebook file in the GitHub Repo.
 - nbviewer utility of Project Jupyter: Open <https://nbviewer.jupyter.org/> and put URL of file in your repository in the textfield as shown. Press Go button to view the notebook.
